

OVERVIEW

5498JB Conduit Body provides a convenient junction box for internally mounted proximity probe connections. The four 3/4" NPT conduit penetrations make fitting up conduit easy. Three screw in plugs are provided to prevent intrusion through a penetration without conduit.

The integrated Low Pressure Feedthrough helps prevent oil wicking with proximity probe sensors mounted in rotating or reciprocating equipment. The seal includes a split grommet that fits over the cable where access to the cable ends isn't practical. The grommet allows adjustment of the cable position. The probe cable can be connected to the extension cable within the conduit body.

Note:

- Plugs are provided for three (3) of the four conduit penetrations
- Plugs are provided to fill unused holes in split grommets (4)
- Insulated leadwires must be used; do not use bare stranded wires
- Wires must be oil sealed on sensor end
